EDUCATION

University of Waterloo <i>Bachelor of Computer Science (Co-op)</i> First-year Computer Science co-op student; recipient of \$20,000 in entrance scholarships.	Sept 2026 – 2031 Waterloo, ON
Rick Hansen Secondary School <i>Ontario Secondary School Diploma</i> Highest graduating average (~99%) in a class of ~460; offered \$300K+ in STEM scholarships; Schulich Leader Scholarship nominee (top STEM student); AP Scholar with 5s in Calculus AB, Calculus BC, and Computer Science A.	2022 – 2026 Mississauga, ON

EXPERIENCE

Co-Founder & CTO <i>TypeScript / Next.js / Node.js / Python / LLM Systems / E2B Sandboxes</i> <i>LibeCode</i> - Leading engineering on an unreleased B2B product, advised by professors from UofT and McMaster. - Finished the eval assertion spec, mapping each scenario to a case and a binary assertion across the platform's failure domains. Now building the MVP end to end: Next.js frontend, Node.js/TypeScript services, an in-house LLM gateway, and network-isolated E2B sandboxes for running untrusted code. - Use AI coding tools (Claude Code, Codex) in a spec-driven workflow: specs are the ground truth, and every change gets a separate review and test pass before merge. - Pivoted the product after customer-discovery feedback from the professors and unicorn founders. - Post-interview at Z Fellows and the Silicon Valley Fellowship.	July 2026 – Present Remote
Software Engineering Intern <i>Python / Flask / MongoDB / Chart.js / LLM Evaluation</i> <i>SalesPatriot (YC W25), via Harvard Undergraduate Ventures-TECH (HUVTSP)</i> - Six-week placement at a defense-contracting startup; wrote a technical memo analyzing the product, its competitors, and its LLM pipeline. - With one cohort partner, built a prototype review dashboard that flagged LLM-generated proposal spans across six risk categories, routed each through a human accept/reject loop, and charted failure rates over time. - Validated against synthetic RFQs rather than live traffic; pitched to the founder.	Summer 2025 Remote
Lead Programmer & Mentor <i>Java / WPILib / Phoenix 6 / CTRE / AdvantageScope / Real-Time Systems / Computer Vision</i> <i>FIRST Robotics Competition (FRC) Teams 1285 & 1241</i> - Lead programmer for 4 years (2,000+ hours) on competition robots, writing real-time control code: PID, motion profiling, AprilTag vision, path following. Rebuilt the autonomous code into modular routines so new paths could be written and tested in minutes, adapting to alliance partners' routes in playoffs. - Won the FRC Dean's List Award at Districts (2024); contributed to 15+ team awards and competed internationally 3x. - Mentor programmers on Team 1241 and write the team's technical documentation, breaking control theory and vision down for newcomers.	2022 – Present Mississauga, ON
Robotics & Coding Instructor <i>Code Ninjas</i> Taught hands-on programming and robotics classes to students ages 5–14; coached 4 FIRST LEGO League teams (40 students).	2025 – 2026 Brampton, ON
Math & STEM Instructor <i>City of Brampton</i> Taught math, photography, and STEM course material to youth through City of Brampton community programs as a fill-in instructor.	2025 – Present Brampton, ON

PROJECTS

CrimeWatcher <i>Python / Pandas / Scikit-learn / Next.js / React / Supabase (PostgreSQL) / Leaflet</i> - Built an automated end-to-end ML pipeline in Python for crime risk forecasting: engineered autoregressive lag and seasonal features in Pandas over a 474K-record Toronto Police dataset, then trained a gradient-boosted regression model (HistGradientBoostingRegressor). - Held out the final 6 months as a time-based test set to prevent data leakage, then deployed the model behind a live choropleth map dashboard.
Project R.O.S.E. (1st Place, WolfHacks 2025) <i>Hugging Face Transformers / Gradio / Python / Java / Micro:bit</i> Won Peel's largest hackathon (76 teams) with a 3-part waste-management solution: an image-classification model for waste sorting, a Java awareness app, and a Micro:bit prototype of a plastic-degrading bacteria machine.
ExpenseCity (2nd Place, IBM Bobathon) <i>IBM Bob / IBM Watsonx / JavaScript / Three.js</i> Extended a three-part expense tracker lab with a 3D visualization map built agentially in IBM Bob.

SKILLS, LEADERSHIP & AWARDS

Languages & Frameworks: Python, TypeScript, JavaScript, Java; Node.js, React, Next.js, Flask; Git/GitHub. Data & AI: Pandas, Scikit-learn, SQL (PostgreSQL), data visualization (Chart.js, Leaflet), LLM APIs (Anthropic, OpenAI, Gemini), Claude Code, Codex. Certifications: AWS Certified Cloud Practitioner (CLF-C02) and AWS Certified AI Practitioner (AIF-C01). Leadership & Community: Workshops & games lead at GiSO 2025; ran robot demos for 150+ middle schoolers; hosted an Hour of Code workshop at an FTC tournament; mentor to Team 1241's programmers. Awards: Highest graduating overall average, 4x hackathon winner, FRC Dean's List Award, Ontario Principals' Council Award, 4x powerlifting medalist.
